## Letter of Support for “6G-Sandbox” (Horizon Europe, SNS Stream C)

To whom it may concern,

I express our interest in the project “6G-Sandbox” (Horizon Europe, SNS Stream C). We appreciate that the project intends to propose our open-source link-level simulator “Sionna” as a rapid prototyping platform in the testbed that it aims to develop.

NVIDIA Corporation is an American technology company incorporated in Delaware and based in Santa Clara, California. It designs graphics processing units (GPUs) for the gaming and professional markets, as well as system on a chip units (SoCs) for the mobile computing and automotive market. Since 2014, NVIDIA has diversified its business focusing on five markets: gaming, professional visualization, data centers, auto, and artificial intelligence.

In addition to GPU manufacturing, NVIDIA provides parallel processing capabilities to researchers and scientists that allow them to efficiently run high-performance applications. They are deployed in supercomputing sites around the world.

NVIDIA is known for its strong partnerships between academia and industry, has large investments in research and development, and supports open platforms. NVIDIA has recently started its own 5G and 6G research activities and we are interested in the option to join the 6G-Sandbox project through the open call mechanism to validate our research results on its testbed.

Sincerely yours,

A handwritten signature in blue ink that reads "David P. Luebke".

David P. Luebke, Ph.D.  
Vice President of Graphics Research  
NVIDIA Corporation
